

## Hamster/Mouse Cage Platform *(Instructions)*

---

### **BELOW ARE THE SIMPLE STEPS REQUIRED TO GET YOUR PLATFORM ASSEMBLED!**

**1.) SCREW** the (4) screws included with the product into the (4) pilot holes in the 'square' (body of the platform)

a.) Make sure these are screwed flush to the upper surface **(they should now be protruding out the bottom of the square, be careful!!)**

**2.) TWIST** the (4) legs included with the product onto the (4) exposed screws nubs tightly!

a.) *Note that the legs conveniently have pilot holes made in them as well, so make sure you are screwing that side into the screw!*

**3.) ADJUST** the (4) legs to your liking!

a.) You can twist them to make them straighter or more slanted, even.

b.) Look out for protruding screws on the surface, as when you twist on the legs- it can cause the screws to raise a bit...

i.) To fix this, simply screw the screw back in whilst holding the leg in place!

**4.) WATCH** your small pets have a blast exploring their new cage platform!
